1 restenosis after PCI

Trial	Treatments	Patients	Trials design and methods
P-32 vs placebo			
PREVENT , 2000 n=80/25 follow-up: 6 mo	intracoronary radiotherapy with the beta-emitting (32)P, 16, 20, or 24 Gy to a depth of 1 mm in the artery wall versus sham procedure	patients with de novo (70%) or restenotic (30%) lesions who were treated by stenting (61%) or balloon angioplasty (39%)	Parallel groups double blind US
INHIBIT , 2002 n=166/166 follow-up: 9 mo	intracoronary beta radiation with a phosphorus-32 source versus placebo	patients with in-stent restenosis and successful coronary intervention	Parallel groups double blind US
START , 2000 n=244/232 follow-up: 8 mo	intracoronary radiation with 90Sr/90Y source versus placebo	patients with in-stent restenosis	Parallel groups double blind US
