

Clinical trials of anistreplase

TrialResults-center www.trialresultscenter.org

1 acute myocardial infarction

Trial	Treatments	Patients	Trials design and methods
anistreplase vs streptokinase			
TEAM 2 , 1991 n=183/176 follow-up:	anistreplase (30 units/2-5 min) versus streptokinase (1.5 million units/60 min)	less than 76 years of age with electrocardiographic ST segment elevation who could be treated within 4 hours of symptom onset	double blind

More details and results :

- myocardial revascularization for acute myocardial infarction in all type of patients at <http://www.trialresultscenter.org/go-Q129>
- fibrinolysis for acute myocardial infarction in all type of patients at <http://www.trialresultscenter.org/go-Q260>

The TEAM-2 Study Investigators. Circulation 1991 Jan;83:126-40 [1984877]

2 acute coronary syndrome

Trial	Treatments	Patients	Trials design and methods
anistreplase vs placebo			
UNASEM , 1992 n=80/79 follow-up: hospital stay, 1y	anistreplase IV 30 UI over 5 minutes versus placebo	Patients without a previous myocardial infarction, with a typical history of unstable angina and ECG abnormalities indicative of ischemia	Parallel groups double blind Europe

More details and results :

- myocardial revascularization for acute coronary syndrome in all type of patients at <http://www.trialresultscenter.org/go-Q22>

- fibrinolysis for acute coronary syndrome in all type of patients at <http://www.trialresultscenter.org/go-Q223>
