

# Clinical trials of double stenting with SES

TrialResults-center [www.trialresultscenter.org](http://www.trialresultscenter.org)

## 1 coronary artery disease

Trial	Treatments	Patients	Trials design and methods
<b>double stenting with SES vs single stenting</b>			
<b>CACTUS , 2009</b> n=177/173 follow-up: 6 months	elective versus stenting of only the main branch, with provisional side-branch T-stenting	patients with true coronary bifurcation lesions	Parallel groups open Europe
<b>Colombo , 2004</b> n=43/43 follow-up: 6.4 months	stenting of both branches using sirolimus-eluting stent versus stenting of the main branch with provisional stenting of the side branch	patients with coronary bifurcation lesions	Parallel groups open Italy
<b>Ferenc , 2008</b> n=101/101 follow-up: 12 months	routine T-stenting with sirolimus-eluting stents in both branches versus provisional T-stenting with SES placement in the main branch followed by kissing-balloon angioplasty and provisional SES placement in the side branch only for inadequate results	patients with a coronary bifurcation lesion	Parallel groups open
<b>NORDIC , 2006</b> n=206/207 follow-up: 14 months	stenting with sirolimus-eluting stents of both main vessel and side branch versus stenting with sirolimus-eluting stent of main vessel and optional stenting of side branch	patients with a coronary bifurcation lesion	Parallel groups open
<b>Pan , 2004</b> n=44/47 follow-up: 11 months	Double stenting of both main and side branche versus single stenting of the main vessel only	patients with true coronary bifurcation lesions	Parallel groups open
