

Clinical trials of eplerenone

TrialResults-center www.trialresultscenter.org

1 heart failure

Trial	Treatments	Patients	Trials design and methods
eplerenone vs placebo			
EMPHASIS-HF , 2010 [NCT00232180] n=1364/1373 follow-up: 21 months	eplerenone versus placebo	patients with New York Heart Association class II heart failure and an ejection fraction of no more than 35%	Parallel groups double blind 29 countries
EPHESUS , 2003 n=3319/3313 follow-up: 16 mo (mean, range 0 to 33)	eplerenone 25 mg per day initially, titrated to a maximum of 50 mg per day versus placebo	patients with acute myocardial infarction complicated by left ventricular dysfunction and heart failure	Parallel groups Double blind 37 countries
REMODEL ongoing [NCT00082589] n=NA follow-up:	Eplerenone versus placebo	Patients with left ventricular systolic dysfunction (EF Less Than or Equal to 35%) and mild to moderate heart failure	Parallel groups double blind
Weir ongoing [NCT00132093] n=NA follow-up: 6 montsh	eplerenone versus placebo	patients with acute myocardial infarction	Parallel groups double blind

More details and results :

- diuretics for heart failure in all type of patients at <http://www.trialresultscenter.org/go-Q75>
- diuretics for heart failure in Left Ventricular Dysfunction after Myocardial Infarction at <http://www.trialresultscenter.org/go-Q76>
- aldosterone blockade for heart failure in all type of patients at <http://www.trialresultscenter.org/go-Q488>
