

Clinical trials of glulisine + glargine

TrialResults-center www.trialresultscenter.org

1 diabetes type 2

Trial	Treatments	Patients	Trials design and methods
insulin glulisine + glargine vs glargine once daily			
Owens , 2011 n=49/57 follow-up: 3 months	basal+bolus (single dose of insulin glulisine immediately prior to the main meal) versus basal insulin (glargin)	patients withT2DM using any basal insulin and HbA1c >7.0% after 3-month of insulin glargine titrated to optimize fasting bloodglucose control	Parallel groups open-label US, UK, Russia
glulisine + glargine vs glulisine + glargine			
OPAL , 2008 n=NA follow-up:	single injection of glulisine before breakfast versus single injection of glulisine before their main mealtime (breakfast, lunch or dinner);	patients with type 2 diabetes who were suboptimally controlled on their previous glargine and OAD regimen
