Clinical trials of late PTCA

TrialResults-center www.trialresultscenter.org

1 acute myocardial infarction

Trial	Treatments	Patients	Trials design and methods
late PTCA vs no PTCA			
Horie et al , 1998 n=44/39 follow-up: 50 months, mean	late revascularization by primary PTCA versus no PTCA	patients with initial Q-wave anterior myocardial infarction >24 hours after onset	
TOAT , 2002 n=32/34 follow-up: 12 months, fixed	late revascularization (late intervention and stent to the LAD + medical therapy) versus conservative therapy (medical therapy)	symptom-free patients after acute myocardial infarction	open
TOMIIS , 1994 n=25/19 follow-up: 4 months, fixed	late PTCA versus no PTCA	patients with a recent, first Q-wave myocardial infarction and an occluded infarct-related coronary artery	open
DECOPI , 2004 n=109/103 follow-up: 34 months, mean	percutaneous revascularization carried out 2-15 days after symptom onset versus medical treatment	patients with a first Q-wave myocardial infarction and an occluded infarct vessel	open
Silva et al , 2005 n=18/18 follow-up: 6 months, fixed	percutaneous coronary intervention versus conservative therapy (no-PCI)	patients with occluded infarct-related artery between 12 h and 14 days post-anterior MI were	open
OAT , 2006 n=1082/1084 follow-up: 35 months, mean	routine PCI and stenting versus optimal medical therapy alone	stable patients who had total occlusion of the infarct-related artery 3 to 28 days after myocardial infarction and who met a high-risk criterion (	open
TOSCA-2 , 2006 [NCT00025766] n=195/186 follow-up: 12 months, fixed	PCI with stenting versus optimal medical therapy alone	patients with an occluded native infarct-related artery 3 to 28 days after MI	open

More details and results :

- Late revascularisation for acute myocardial infarction in late reperfusion at http://www.trialresultscenter.org/go-Q134
- myocardial revascularization for acute myocardial infarction in ¿6h from onset of symptoms at http://www.trialresultscenter.org/go-Q249
