

Clinical trials of urokinase

TrialResults-center www.trialresultscenter.org

1 acute myocardial infarction

Trial	Treatments	Patients	Trials design and methods
urokinase vs control			
USIM , 1991 n=1128/1073 follow-up: in hospital	urokinase bolus dose of 1 million U repeated after 60 minutes plus heparin versus control (heparin alone)	patients with acute myocardial infarction within 4 hours of the onset of pain	Parallel groups open Italy
t-PA + urokinase vs t-PA			
TAMI 5 (t-PA+uroK vs tPA) , 1991 n=194/191 follow-up:	t-PA + urokinase versus t-PA	patient with acute myocardial infarction	open

└ More details and results :

- myocardial revascularization for acute myocardial infarction in all type of patients at <http://www.trialresultscenter.org/go-Q129>
- fibrinolysis for acute myocardial infarction in all type of patients at <http://www.trialresultscenter.org/go-Q260>

Results of thrombolysis and angioplasty in myocardial infarction-phase 5 randomized trial. TAMI Study Group. Circulation 1991 May;83:1543-56 [[1902405](#)]

2 acute coronary syndrome

Trial	Treatments	Patients	Trials design and methods
intracoronary urokinase vs placebo			
TAUSA , 1994 n=232/237 follow-up: hospital stay	intracoronary urokinase 250000 UI or 500000 UI versus placebo	ischemic rest pain with or without a recent (<1 month) infarction	Parallel groups double blind USA

More details and results :

3 venous thrombosis

Trial	Treatments	Patients	Trials design and methods
urokinase vs no fibrinolysis			
Kiil , 1981 n=20 follow-up:	urokinase 200,000 U IV over 24 hours. After 18 hours, heparin loading dose of 15,000 units then 40,000 U/day for 5 days (+placebo) versus heparin 40,000 U/day IV for 6 days (+placebo)	patients with venographically confirmed DVT duration <72 hours	Parallel groups Double blind Denmark
Schweizer (urokinase) , 1998 n=NA follow-up:	Urokinase 100,000 IU/hr IV into pedal vein continuously for 7 days. Heparin IV for 7 days. Plasminogen monitored. Warfarin from day 7 to 12 monthsd=132 versus heparin IV, adjusted for 7 days	patients with venographically confirmed DVT of leg duration <7 days	Parallel groups single blind Germany

continued...

Trial	Treatments	Patients	Trials design and methods
Schweizer (local urokinase) , 2000 n=NA follow-up:	Local urokinase 100,000 IU/day infused continuously. Fibrinogen and plasminogen monitored. Heparin IV given concomitantly versus heparin IV, adjusted	patients with thrombosis of popliteal or more proximal veins confirmed by venogram at more than one level of duration <9 days	Parallel groups single blind Germany
Schweizer (systemic urokinase) , 2000 n=NA follow-up:	Systemic urokinase 5,000,000 IU/day over 4 hours for up to 7 days. IV heparin given concomitantly versus heparin IV, adjusted	patients with thrombosis of popliteal or more proximal veins confirmed by venogram at more than one level of duration <9 days	Parallel groups single blind Germany

More details and results :

4 pulmonary embolism

Trial	Treatments	Patients	Trials design and methods
urokinase vs no fibrinolysis			

continued...

Trial	Treatments	Patients	Trials design and methods
Marini , 1988 n=20/10 follow-up: 7 days	urokinase 800,000 U/d IV for 72 h, UK 3,300,000 U IV for 12 h and heparin versus heparin	patients with pulmonary embolism	open
urokinase vs placebo			
UPET , 1973 n=82/78 follow-up: <14 days	urokinase 2,000-U/lb bolus, then 2,000 U/lb per h IV for 12 h and heparin versus placebo + Heparin (a loading dose of 75 U/pound, then 10 U/pound/hr for 12 hr infusion, then heparin for a minimum of 5 days, followed by heparin or warfarin therapy for a total of 14 days)	patients with pulmonary embolism	Parallel groups double blind US

More details and results :

- fibrinolysis for pulmonary embolism in all type of patients at <http://www.trialresultscenter.org/go-Q110>
