

# Clinical trials of myocardial revascularization for acute coronary syndrome in Elderly patients

TrialResults-center [www.trialresultscenter.org](http://www.trialresultscenter.org)

## 1 early invasive strategy

Trial	Treatments	Patients	Trials design and methods
<b>routine invasive strategy vs conservative strategy</b>			
<b>TACTICS-TIMI 18 elderly (sub group) , 2001</b> n=491/471 follow-up: 6 mo	early invasive management strategy versus conservative management strategy	patients 65 years of age and older with unstable angina and nonSTsegment elevation myocardial infarction	open 9 countries
<b>the Italian Elderly ACS study ongoing</b> [NCT00510185] n=NA follow-up:	early aggressive approach versus initially conservative approach	patients older than 74 years of age with NSTEACS

## 2 About TrialResults-center.org

TrialResults-center is an innovative knowledge database that collects the results of RCTs and provides dynamic interactive systematic reviews and meta-analysis in the field of all major heart and vessels diseases.

The TrialResults-center database provides a unique view of the treatment efficacy based on all data provided directly from clinical trial results, offering a valuable alternative to personal bibliographic search, published meta-analysis, etc. Furthermore, it would allow comparing easily the various concurrent therapeutic for the same clinical condition.

Rigorous meta-analysis method is used to populate TrialResults-center: widespread search of published and non published trials, study selection using pre-specified criteria, data extraction using standard form.

TrialResults-center is continually updated on a weekly basis. We continually search all new results (whatever their publication channel) and these news results are immediately added to the database with a maximum of 1 week.

TrialResults-center is non-profit and self-funded.
