

Clinical trials of inhibition of the renin-angiotensin system (ACEI or ARB) for heart failure in patients with preserved-LVEF heart failure

TrialResults-center www.trialresultscenter.org

1 angiotensin receptor blocker

Trial	Treatments	Patients	Trials design and methods
candesartan vs placebo			
CHARM preserved , 2003 n=1514/1509 follow-up: 36.6 months	candesartan target dose 32 mg once daily versus placebo	patients with NYHA II-IV heart failure and LVEF higher than 40%	Parallel groups double blind 26 countries
ibesartan vs placebo			
I-PRESERVE (McMurray) , 2008 [NCT00095238] n=2067/2061 follow-up: 49.5 months	ibersatan 300mg daily versus placebo	patients with NYHA II, III, or IV heart failure and an ejection fraction of at least 45%	Parallel groups double blind Western Europe, Eastern Europe, North America, South America, South Africa, and Australia

3 About TrialResults-center.org

TrialResults-center is an innovative knowledge database that collects the results of RCTs and provides dynamic interactive systematic reviews and meta-analysis in the field of all major heart and vessels diseases.

The TrialResults-center database provides a unique view of the treatment efficacy based on all data provided directly from clinical trial results, offering a valuable alternative to personal bibliographic search, published meta-analysis, etc. Furthermore, it would allow comparing easily the various concurrent therapeutic for the same clinical condition.

Rigorous meta-analysis method is used to populate TrialResults-center: widespread search of published and non published trials, study selection using pre-specified criteria, data extraction using standard form.

TrialResults-center is continually updated on a weekly basis. We continually search all new results (whatever their publication channel) and these news results are immediately added to the database with a maximum of 1 week.

TrialResults-center is non-profit and self-funded.
