

Clinical trials of Intravascular Brachytherapy for restenosis after PCI in all type of patients

TrialResults-center www.trialresultscenter.org

1 beta radiation

Trial	Treatments	Patients	Trials design and methods
rhenium-188 vs control			
Schhlen , 2001 n=NA follow-up: 6mo (12 mo)	rhenium-188 liquid-filled balloon system versus no radiation	patients undergoing percutaneous transluminal coronary angioplasty for in-stent restenosis	Parallel groups open
ECRIS , 2003 n=113/112 follow-up: 6 mo	Intracoronary beta-irradiation with a rhenium-188-filled balloon catheter versus no additional intervention	patients with de novo and restenotic lesions	Parallel groups open Germany
SPARE , 2004 n=104/83 follow-up: 9mo (3y)	rhenium-188 filled balloon system versus control	patient with successful catheter-based treatment of de novo or restenotic lesion	Parallel groups open Korea
P-32 vs placebo			
PREVENT , 2000 n=80/25 follow-up: 6 mo	intracoronary radiotherapy with the beta-emitting (32)P, 16, 20, or 24 Gy to a depth of 1 mm in the artery wall versus sham procedure	patients with de novo (70%) or restenotic (30%) lesions who were treated by stenting (61%) or balloon angioplasty (39%)	Parallel groups double blind US
INHIBIT , 2002 n=166/166 follow-up: 9 mo	intracoronary beta radiation with a phosphorus-32 source versus placebo	patients with in-stent restenosis and successful coronary intervention	Parallel groups double blind US
START , 2000 n=244/232 follow-up: 8 mo	intracoronary radiation with 90Sr/90Y source versus placebo	patients with in-stent restenosis	Parallel groups double blind US

2 gamma radiation

2

Trial	Treatments	Patients	Trials design and methods
iridium-92 vs placebo			
SCRIPPS , 1997 n=26/29 follow-up: 6 mo	catheter-based irradiation with iridium-192 versus placebo	patients with restenosis	Parallel groups double blind US
WRIST , 2001 n=65/65 follow-up: 6 mo	intracoronary gamma-radiation with (192)Ir 15 Gy versus placebo	presented with symptoms of angina and angiographic evidence of in-stent restenosis	Parallel groups double blind
GAMMA-ONE , 2001 n=131/121 follow-up: 9 mo	intracoronary radiotherapy with iridium-192 versus placebo	patients with in-stent restenosis	Parallel groups double blind US
SVG-WRIST , 2002 n=60/60 follow-up: 12 mo	intravascular treatment with a ribbon containing iridium-192 versus placebo	patients with in-stent restenosis in saphenous-vein grafts	Parallel groups double blind US
Long-WRIST , 2003 n=60/60 follow-up: 1 y	gamma radiation with 192Ir versus placebo	patients with diffuse long in-stent restenosis in native coronary arteries (lesion length, 36 to 80 mm)	Parallel groups double blind US

3 About TrialResults-center.org

TrialResults-center is an innovative knowledge database that collects the results of RCTs and provides dynamic interactive systematic reviews and meta-analysis in the field of all major heart and vessels diseases.

The TrialResults-center database provides a unique view of the treatment efficacy based on all data provided directly from clinical trial results, offering a valuable alternative to personal bibliographic search, published meta-analysis, etc. Furthermore, it would allow comparing easily the various concurrent therapeutic for the same clinical condition.

Rigorous meta-analysis method is used to populate TrialResults-center: widespread search of published and non published trials, study selection using pre-specified criteria, data extraction using standard form.

TrialResults-center is continually updated on a weekly basis. We continually search all new results (whatever their publication channel) and these news results are immediately added to the database with a maximum of 1 week.

TrialResults-center is non-profit and self-funded.
