

# Clinical trials of antithrombotics for percutaneous coronary intervention in MI patients undergoing primary PCI

TrialResults-center [www.trialresultscenter.org](http://www.trialresultscenter.org)

## 1 Low molecular weight heparin

Trial	Treatments	Patients	Trials design and methods
<b>enoxaparin vs UFH</b>			
<b>ATOLL , 2010</b> n=450/460 follow-up: 30 days	IV enoxaparin versus UFH	patients undergoing PCI for acute STEMI	Parallel groups open Austria, France, Germany, and US
<b>Brieger</b> n=346/234 follow-up:	enoxaparin versus unfractionated heparin	patients undergoing percutaneous coronary intervention for ST-segment elevation myocardial infarction (STEMI)	
<b>enoxaparin vs unfractionated heparin</b>			
<b>STREAM</b> <i>ongoing</i> [NCT00882635] n=NA follow-up:	Enoxaparin versus Unfractionated Heparin	St Elevation Myocardial Infarction patients undergoing primary percutaneous coronary intervention

## 2 About TrialResults-center.org

TrialResults-center is an innovative knowledge database that collects the results of RCTs and provides dynamic interactive systematic reviews and meta-analysis in the field of all major heart and vessels diseases.

The TrialResults-center database provides a unique view of the treatment efficacy based on all data provided directly from clinical trial results, offering a valuable alternative to personal bibliographic search, published meta-analysis, etc. Furthermore, it would allow comparing easily the various concurrent therapeutic for the same clinical condition.

Rigorous meta-analysis method is used to populate TrialResults-center: widespread search of published and non published trials, study selection using pre-specified criteria, data extraction using standard form.

TrialResults-center is continually updated on a weekly basis. We continually search all new results (whatever their publication channel) and these news results are immediately added to the database with a maximum of 1 week.

TrialResults-center is non-profit and self-funded.
