

Clinical trials of hormonal replacement therapy for cardiovascular prevention in primary prevention

TrialResults-center www.trialresultscenter.org

1 hormonal replacement therapy

Trial	Treatments	Patients	Trials design and methods
combined estrogen and progestogen vs placebo			
WHI , 2002 n=8506/8102 follow-up: 5.2 y	conjugated equine estrogens, 0.625 mg/d, plus medroxyprogesterone acetate, 2.5 mg/d, in 1 tablet versus placebo	postmenopausal women aged 50-79 years with an intact uterus at baseline	Factorial plan double-blind USA
estrogen vs placebo			
EPAT , 2001 n=111/111 follow-up: 2 y	micronized 17beta-estradiol (1 mg/d) versus placebo	postmenopausal women 45 years of age or older without preexisting cardiovascular disease and with low-density lipoprotein cholesterol levels of 3.37 mmol/L or greater (≥ 130 mg/dL)	Parallel groups double-blind USA

2 About TrialResults-center.org

TrialResults-center is an innovative knowledge database that collects the results of RCTs and provides dynamic interactive systematic reviews and meta-analysis in the field of all major heart and vessels diseases.

The TrialResults-center database provides a unique view of the treatment efficacy based on all data provided directly from clinical trial results, offering a valuable alternative to personal bibliographic search, published meta-analysis, etc. Furthermore, it would allow comparing easily the various concurrent therapeutic for the same clinical condition.

Rigorous meta-analysis method is used to populate TrialResults-center: widespread search of published and non published trials, study selection using pre-specified criteria, data extraction using standard form.

TrialResults-center is continually updated on a weekly basis. We continually search all new results (whatever their publication channel) and these news results are immediately added to the database with a maximum of 1 week.

TrialResults-center is non-profit and self-funded.
