

Clinical trials of New P2Y12 Inhibitors for acute coronary syndrome in all type of patients

TrialResults-center www.trialresultscenter.org

1 P2Y12 receptor antagonist

Trial	Treatments	Patients	Trials design and methods
elinogrel vs placebo			
ERASE-MI , 2009 n=34/36 follow-up: 30-37 days	elinogrel 10, 20, 40, or 60 mg as a single intravenous bolus versus placebo	STEMI patients	Parallel groups double blind
ticagrelor vs clopidogrel			
PLATO , 2009 [NCT00391872] n=9333/9291 follow-up: 1 y	ticagrelor 90mg twice daily versus clopidogrel 75mg once daily	patients with an acute coronary syndrome, with or without ST-segment elevation (onset of symptoms within the previous 24h).	Parallel groups double blind 43 countries
DISPERSE-2 (90mg) , 2007 n=334/327 follow-up: 12 weeks	ticagrelor 90 mg twice daily versus clopidogrel	patients with NSTEMI-ACS, treated with aspirin and standard therapy for ACS	Parallel groups double blind

2 reversible ADP receptor antagonist

Trial	Treatments	Patients	Trials design and methods
cangrelor up front vs clopidogrel up front			
CHAMPION-PCI , 2009 [NCT00305162] n=4367/4355 follow-up: 48 h	cangrelor up front (cangrelor administered before percutaneous coronary intervention and followed by clopidogrel) versus clopidogrel up front (clopidogrel followed by placebo)	high risk patients requiring PCI	Parallel groups double blind 14 countries
cangrelor up front vs delayed clopidogrel			
CHAMPION-PLATFORM , 2009 [NCT00385138] n=2693/2669 follow-up: 48 h	cangrelor up front (cangrelor during PCI followed by 600 mg of clopidogrel) versus delayed clopidogrel (placebo during PCI followed by 600 mg of clopidogrel)	patients with acute coronary syndrome undergoing percutaneous coronary intervention	Parallel groups double blind 18 countries

4 About TrialResults-center.org

TrialResults-center is an innovative knowledge database that collects the results of RCTs and provides dynamic interactive systematic reviews and meta-analysis in the field of all major heart and vessels diseases.

The TrialResults-center database provides a unique view of the treatment efficacy based on all data provided directly from clinical trial results, offering a valuable alternative to personal bibliographic search, published meta-analysis, etc. Furthermore, it would allow comparing easily the various concurrent therapeutic for the same clinical condition.

Rigorous meta-analysis method is used to populate TrialResults-center: widespread search of published and non published trials, study selection using pre-specified criteria, data extraction using standard form.

TrialResults-center is continually updated on a weekly basis. We continually search all new results (whatever their publication channel) and these news results are immediately added to the database with a maximum of 1 week.

TrialResults-center is non-profit and self-funded.
