

# Clinical trials of antithrombotics for thrombosis prevention in neurosurgery

TrialResults-center [www.trialresultscenter.org](http://www.trialresultscenter.org)

## 1 low molecular weight heparin

Trial	Treatments	Patients	Trials design and methods
<b>enoxaparin vs placebo</b>			
<b>Agnelli , 1998</b> n=153/154 follow-up: 30 days	Enoxaparin, 40 mg/d subcutaneously within 24 hours postoperatively plus compression stockings for $\geq 7$ days versus compression stockings + placebo	Elective neurosurgery, 18 years or older, without excess bleeding risk	
<b>Melon , 1987</b> n=67/63 follow-up: NA	Enoxaparin, 20 mg/d subcutaneously 18-24 hours postoperatively for 10 days versus placebo	Neurosurgery, adult, 45-90 kg of weight, without excess bleeding risk	
<b>nadroparin vs placebo</b>			
<b>Nurmohamed , 1996</b> n=241/244 follow-up: 56 days	Nadroparin, 7500 Institute Choay anti-Xa units per day subcutaneously 18-24 hours postoperatively plus compression for 10 days versus compression stockings + placebo	Craniotomy or spinal surgery for tumor or injury, 18 years or older, without excess bleeding risk

## 2 unfractionated heparin

Trial	Treatments	Patients	Trials design and methods
<b>UFH vs no treatment</b>			

continued...

Trial	Treatments	Patients	Trials design and methods
Cerrato , 1978 n=50/50 follow-up: NA	Unfractionated heparin, 5000 IU subcutaneously 3 times a day, starting 2 hours preoperatively for +7 days versus no treatment	Elective neurosurgery for tumors, 40 years or older

## 3 About TrialResults-center.org

TrialResults-center is an innovative knowledge database that collects the results of RCTs and provides dynamic interactive systematic reviews and meta-analysis in the field of all major heart and vessels diseases.

The TrialResults-center database provides a unique view of the treatment efficacy based on all data provided directly from clinical trial results, offering a valuable alternative to personal bibliographic search, published meta-analysis, etc. Furthermore, it would allow comparing easily the various concurrent therapeutic for the same clinical condition.

Rigorous meta-analysis method is used to populate TrialResults-center: widespread search of published and non published trials, study selection using pre-specified criteria, data extraction using standard form.

TrialResults-center is continually updated on a weekly basis. We continually search all new results (whatever their publication channel) and these news results are immediately added to the database with a maximum of 1 week.

TrialResults-center is non-profit and self-funded.
